

Teacher Guidance

This STEAM Build a Whale Scale Investigation is a great way to help students develop a real sense of scale when it comes to the size of different whale species and practise some research, measurement and graphing skills.

The Measure It Out task can be done as a whole class or small group activity according to the materials available to you. This is a great chance to snap some photos of hands-on learning! Depending on your students' ability, some activities may need to be scaffolded more carefully or introduced before students go off to complete the task independently.

Are you learning all about whales? Check out our other resources developed in partnership with Project Jonah for more engaging activities your students will love.
